Integrated Pest Management (IPM) Program

## Modular Ecological Design (2007)

An Intensive Fruit and Vegetable Polyculture System Joe Kovach, J. Mendez, D. Murray, B. Beery, I. Williams

Goal: To determine the optimal layout (in terms of economics, pest density, efficiency) of an intensive fruit and vegetable polyculture system that can be used by the small urban farmer.

- Design a food production system that:
- Simulates natural systems (genetic, temporal and spatial diversity)
- Use ecological principles (minimize disruptions, prevention, biocontrol, compost)
- Economically viable ( $\$ 10 / \mathrm{ft}$ of row $\approx \$ 90 \mathrm{~K} / \mathrm{A}$ )

Methods Each modular unit or plot (about $44^{\prime} \times 60^{\prime}$ ) consists of 4 tree/shrub fruit crops (apples, blueberries, peaches, raspberries) and 4 herbaceous commodities (strawberries, edamame soybeans, tomatoes, and snap peas). Annual strawberries will replace snap peas in September.

- Each perennial commodity includes three cultivars (early, mid and late). Cultivars were usually selected for their pest resistance and cold hardiness (peaches).
- There are 4 treatments, replicated 4 times: 1) Solid rows (SR), 2) Woody fruit commodities and herbaceous commodities mixed within a row (MR), 3) Woody fruit and herbaceous commodities mixed in a checkerboard arrangement (CB) and 4 ) the mixed row configuration on raised beds ( 2 landscape timbers).
- Approximately 1.5 acres. In 2007 The eastern most treatments were covered by Haygrove high tunnels (May1-3) and a deer fence added.

Treatments: Mix Row (MR), Solid Row (SR), Checkerboard (CB), Raised Beds Mixed Rows (RB)

Plot Layout

SR

Peach

Raspberry
Snap pea
Edamame

Tomato
Strawberry

Treatment

## Costs

2005-2006 - Establishment cost - \$24,477 (\$3.20/ft of row)
2007 - Dear/racoon/fox fencing - $\$ 730$ (\$0.75/ft)
Haygrove high tunnels - $\$ 18,306$ for 0.25 A ( $\$ 9.50 / \mathrm{ft}$ - only HT plots)
Labor - \$1.00/ft for $\$ 8 / \mathrm{hr}$ for 6 months.

## Growth

2006 - RB treatment had the most yield/growth (14-81\% inc.) for most crops

Difference in High Tunnel Growth (cm) (applied 1 May 2007)

| Treatment | All | Apple | Blue | Rasp | Peach | Soy | Straw \%Trees w/ aphid/mites |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No High Tunnel | 172 a | 232 a | 118 a | 142 a | 271 a | 74 a | 41 a | 19 a |
| High Tunnel | $\underline{196}$ b | 243 a | 123 a | $\underline{185}$ b | $\underline{333} \mathbf{b}$ | $\underline{86 ~ b}$ | 44 b | 38 b |
| \% increase | 14\% |  |  | 30\% | 23\% | 16\% | 7\% |  |

Pest Problems - Septoria on tomato, powdery mildew on HT strawberries, Jap. beetles on raspberries and soybeans, Potato leafhopper on apples, HT apples = Wooly apple aphid, Green apple aphid, Mites (ERM\&TSSM)

Japanese Beetles
$2005=15 \mathrm{~K}$ beetles, primarily on soybeans
$\mathbf{2 0 0 6}=\mathbf{6 0 K}$, most on raspberry and peaches
$\mathbf{2 0 0 7}=\mathbf{2 8 0 K}$, soybean and raspberry ( $\mathrm{HT}=4 \%$, No $\mathrm{HT}=96 \%$ )

Treatment $\mathrm{JB} / 5 \mathrm{ft} /$ date

| RB | $\mathbf{1 7 . 3} \mathbf{a}$ |
| :--- | :--- |
| MR | 14.9 b |
| SR | 14.7 b |
| CB | 13.6 b |

| Raspberry |  |  | Peaches |  |  | Soybean |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Treatment | $\underline{2006}$ | 2007 | Treatment 2 | $\underline{2006}$ | $\underline{2007}$ | Treatment | $\underline{2007}$ |
| MR | 10.4 a | 35.0 b | MR 13.8 | 13.8 a | 4.3 ab | MR | 38.1 b |
| CB | 11.7 ab | 29.8 c | CB 10. | 10.1 bc | 3.6 b | CB | 35.7 bc |
| RB | 13.3 bc | 43.6 a | RB 1 | 11.5 ab | 2.5 c | RB | 45.7 a |
| SR | 15.3 c | 37.8 b | SR | 7.7 c | 4.9 a | SR | 30.3 c |
| Cultivar | $\underline{2006}$ | 2007 | Cultivar | 2006 | 2007 | Cultivar | 2007 |
| Royalty | 3.1 a | 15.5 a | Flamin Fury | y 16.8 a | 5.6 a | Say Early | 31.2 a |
| Caroline | 12.0 b | 36.4 b | Bounty | 8.1 b | 3.0 b | Say Mid | 20.4 b |
| Prelude | 22.9 c | 57.7 c | Glowingstar | 7.3 b | 2.8 b | Mooncake | 60.7 c |

Economics - Best plots, local supermarket price

| Crop | Gross \$/ft | Total Harvest Times - 2005 |  |
| :---: | :---: | :---: | :---: |
| Green Beans '05 | 1.99 | (green beans, tomato, soybeans, sw. corn) |  |
| Sw. Corn '05 | 2.25 |  |  |
| Edamame '05 | 3.35 | Treatment | Hours/Meter/Person |
| Tomato '05 | 11.83 | SR | 5.8 |
| Strawberry '06 | 9.21 | RB | 6.8 |
| Summer Raspberry '06 | 8.80 | MR | 6.4 |
| Fall Raspberry '06 | 7.46 | CB | 7.3 |
| Tomato '06 (cupid) | 26.67 |  |  |
| Strawberry '07 | 13.48 |  |  |
| Peaches '06, '07 | 0.00 |  |  |
| Apple '06, '07 | 0.00 |  |  |

## 2007
